

Tokai automates its Business Processes and shortens Inventory Cycles

Tokai Rubber Auto Parts India (TRIN) is a leading manufacturer of automotive rubber product, engine mounting, cab mounting having operations in Bangalore and Rajasthan.

Industry: Rubber products

Location: Bangalore

Size: 100-250 Employees

Tokai sought to automate their manual processes in place to bring major transformation in business complexities and revenues. They wanted a solution that would automate their supply chain and logistics of finished goods and raw material parts.

Implemented Dynamics AX R3

Since going live on Dynamics AX, Tokai Rubber has drastically improved planning and inventory control capabilities. They gained full visibility of all material movement between locations, scrap and job works, and reduced shipping errors. The enhanced automations in the operations and financials process enabled real-time financial visibility and reduced the financial closing month end process and compliances.
