

ERP for Fit-Out Industry

Powered By **Dynamics 365 Business Central**

Empowering our clients

NAVBUILD manages the high volume projects of different sizes, complex materials and rapid project delivery with joinery manufacturing helps the fit out contractors increase revenue, customer service levels, manage the margins pressure and edge over competitions.

Digitize Process

Automate critical business processes, from estimation to plan and execute effectively

Enhance Productivity

Simplifies the data, process standardization connects people in a smart way to produce great results

Improve Profits

Plan precise and govern Project execution efficiently to achieve desired project profits

Built on Microsoft Dynamics

Powered by Dynamics 365 Business central, NAVBUILD offers the complete Unified Platform, Certified by Microsoft

We help businesses to grow!

NAVBUILD, Specialised ERP solutions helps Interior Fit-Out Contractors be more efficient and effective- Are you ready?

Industry Solutions for Engineering & Construction

Powered by [Microsoft Dynamics 365 Business Central](#)

Features

Estimation	Bidding a complex project or more projects per month?, NAVBUILD automates the entire tendering and estimation process with ease and precision. NAVBUILD allows to import your BoQ excel sheets and blends it with the rate analysis library build for every job to produce preciously and the job costing more accurate and faster.
Project Planning & Schedule	Post winning the contracts, preparing work break down structure and matching it up with project schedule (Bi-directional collaboration with MS Project/ Primavera) is one unique value proposition which Navbuild offers and enables the visibility you need to view and manage schedule variances, costs across your entire project life cycle and control your variation orders and associated costs much easier. Any execution activity is compared and sequenced with the work scheduled to track project progress.
Jobs Demand Planning	NAVBUILD Jobs Demand Planning ease the procurement process of identifying and consolidating requirements and outlines (How, what and when) the right materials, resources, machines and services that's required to execute the Project with greter confidence, and capacity can be optimized
Procurement	Once sequence of job with cost is defined through project budget and schedule in Navbuild, every action from there on is tagged without compromise. From site to the purchase department they rely on a unified information drawn and Navbuild brings absolute clarity in project driven supply chain demanded in the execution process.
Sub Contract Management	It's an integral part of the business to outsource work for various reasons so it becomes essential to evaluate the Sub-Contractors in all dimension to establish transparency in selection and governance. Navbuild brings functionalities which enables users to manage external work orders effectively with the needed quality and automates the all the tasks associated with sub-contractor, track performance, and ensures the timely payments.
Change Order Management	NAVBUILD enable you to manage change proactively by capturing and organizing change information that affects the overall project schedule and cost. It allows you to capture each change, from the estimate phase to final approval, for both budgeted and committed costs.
Project Site Management	Planning activities at the site level is completely different from that of the project management office. Navbuild understanding the difference allows site engineers to create daily plans with detailed check list to move the job tasks in the sequence which suits the ground conditions. Indenting, receiving and recording consumption of material and service in line with budgets complexities are simplified with NAVBUILD Site App.
Project Accounting	Dynamics 365 BC Project Accounting with NAVBUILD updates projectwise entries and compare them instantly budgeted Vs actuals or its intelligence in building cost to complete scenarios at every stage of the project makes NAVBUILD Powerful. Cash forecast and consumption based revenue recognition as demanded by the industries are made possible with NAVBUILD.
Joinery Manufacturing	Powered by Dynamics 365 Manufacturing capabilities, NAVBUILD offers extensive features to manage flexible BoM for your BoQs, dynamic routings to handle custom manufacturing workflows, Waste handling, Warehouse Process, Capacity planning, Item tracking and Quality Control to Streamline, either advanced Manufacturing or Assembly orders for Joineries/Furnitures.
Vendor Portal	Vendor Self Service Portal Streamline the supplier, contractors and Service providers on-boarding, RFP, Compare the Quotes, Reverse Bidding, Order Acknowledgement and Invoice Matching, Payment reconciliations. Further CETAS Vendor Portal enhances communications and collaborations with Procurement team and Vendors seamlessly and automates time-consuming manual tasks.
Workflow & Notifications	Streamline and automate your complex project review, Project events, exceptions, multiple approval process and managing tasks, schedule notifications with enterprise workflow and notifications engine.
Document Management	The need for document management is high and very critical for the success of projects. NAVBUILD Offers both Dynamics 365 BC standard Link capabilities or Microsoft sharepoint capabilities allows the Project team members a centralised, reliable document management for collaboration and workflow need to fulfill a task with realtime, anywhere access.
MIS Reports	NAVBUILD inbuilt Reports and Dashboards give you insights into your data right from Project estimation, Win/Loss Analysis, Budget Vs Actual, Earned Value, Estimate to complete, Project Cash flow, WIP and Industry KPIs to ensure you make the right informed decisions real time for every Roles. Further, Dynamics 365 Business central advanced reporting tools allow you to generate the right reports for the right situations.
